With 3 ways to activate and a broader range of sizes than most other brands, SurGuard®3 is the industry's most adaptable safety needle. Add separate thumb and finger grips, sharper needles, and competitive pricing, and you'll understand why we say SurGuard®3 is the one needle that fits *every* clinician's style.

- 3 modes of activation—thumb, finger, or hard surface
- Separate finger and thumb grips with ridges and nonslip surfaces
- Hub and needle locks for security post activation
- Broad range of sizes
- Firm injection feel
- Sharpest needles among major brands tested*
 - 10% sharper than similar needles from Becton, Dickinson and Company
 - More comfortable injections for patients

Bottom line: No matter what you're looking for in a needle, you're looking for SurGuard®3.

Terumo's Surshield Safety Winged Needle Sets with one-handed activation provides a solution with a cost-effective, easy to use design. Press shield over the needle until it locks into place.

- Unique needle locking mechanism helps reduce the risk of needlestick injuries
- One-handed activation for safety and ease of use
- No change in needle insertion technique
- Simple, built-in safety design is easy to use

1. Flip safety shield toward needle. Remove the needle and apply digital pressure to the site.

2. With the wing and shield between your thumb and index finger, press the safety shield against a hard surface such as a bedside table until an audible click is heard.

3. Visually confirm activation of the safety feature.

Refer to the product labels and package insert for complete warnings, precautions, potential complications, and instructions for use.

SurFlash® Polyurethane I.V. Catheters

With SurFlash®, visual confirmation of catheter placement occurs due to a unique flashback feature. Flashback appears between the specially grooved needle and the catheter, providing medical staff with a higher certainty of proper catheter placement. The specially grooved needle also improves the ability to visualize flashback in patients where venipuncture is more difficult, and because SurFlash® is made of polyurethane, which is firm at room temperature and softer at body temperatures, patient comfort is enhanced without compromising proper technique.
